

YASH PANDYA (AI Systems & Platform Engineer)

07563041197 | yashpandya0411@gmail.com | yashdataquestguru.com | LinkedIn: linkedin.com/in/yash-pandya-data | London, UK

PROFESSIONAL SUMMARY

I am a **Technical Leader** who builds the "internal brain" of modern platforms. With over 5 years of experience, I specialise in the workflows and automation layers that allow AI to work with real-world data. I am an expert in **Python engineering** and in building **RAG (Retrieval-Augmented Generation)** systems that let AI safely use a company's private files to give accurate answers. I currently lead AI engineering on **enterprise legacy modernisation** and serve as part-time CTO of an AI assistant start-up. I have a proven track record of helping organisations in highly regulated sectors (like Healthcare and Government) move from messy, manual processes to smart, automated systems.

CORE SKILLS

- **Building the Backbone:** Expert in Python (FastAPI), asynchronous systems and designing how data moves between applications.
- **Applied AI & RAG:** Systems that let AI "read" and answer questions from private documents, LLM integration (GPT-4o) and automation of complex workflows.
- **Legacy Modernisation:** Reverse engineering legacy code into dependency graphs, data lineage and documentation, then forward engineering onto modern architecture.
- **System Connections:** Connecting modern AI tools to legacy systems using custom bots and integration middleware.
- **Cloud & Reliability:** Azure and AWS, separate development and live environments, high availability and data security.
- **Regulated Data:** Handling sensitive Healthcare and Public Sector information while keeping it organised, private and compliant.

PROFESSIONAL EXPERIENCE

Lead AI Engineer | DigiColab

London, England | Jan 2026 – Present

- **Legacy Modernisation Platform:** Leading development of an AI-assisted platform that reads complex legacy codebases and turns them into clear dependency graphs, data lineage and documentation, making large systems easier to understand and migrate.
- **Reverse to Forward Engineering:** Delivered the reverse-engineering and end-to-end lineage stages; now leading the forward-engineering phase, generating modern equivalents directly from the parsed logic.
- **AI Chat & RAG Search:** Added an AI chat feature using GPT-4o with RAG search, so users can ask questions about their code and project documents and get answers backed by real sources.
- **Cloud Setup & Client Onboarding:** Set up separate Azure development and live environments, and made onboarding plug-and-play on standard services (PostgreSQL, Azure Blob Storage) instead of custom setups.

Chief Technology Officer (Part-Time) | omniPA.ai

London, England | Jul 2025 – Present

OmniPA: an AI personal assistant and "Life OS" app (omnipa.ai)

- **Smart Automation & RAG:** Built the core "bridge" connecting AI models to private data stores, so the assistant answers from the user's own emails, schedule and files.
- **Product Features:** Inbox action-item extraction, conversational reminders with push notifications, shopping lists from photos and AI travel planning, with privacy-first permissions.
- **Platform Backbone:** Designed the internal engine in **Python (FastAPI)** to handle thousands of concurrent tasks without slowing down or crashing.
- **System Architecture:** Set up the AWS cloud infrastructure so every layer, from database to AI, communicates securely.
- **Technical Leadership:** Lead the development squad turning customer needs into simple, working features in the React Native mobile app.

IT Technical Consultant | Acorn Fertility (Healthcare)

London, England | Mar 2023 – Jun 2025

- **Smart Tools for Clinicians:** Built an AI-powered tool that helps doctors predict treatment success with 85% accuracy, managing the full lifecycle from code to live clinic use.
- **Connecting Disconnected Systems:** Created "bridge" software allowing modern AI tools to safely pull data from sensitive medical databases that lacked modern APIs.
- **Data Reliability:** Automated how the company cleans and organises its records, keeping data ready for high-stakes clinical reporting.

IT Data Analyst | The Hospital Fertility Group

London, England | Sep 2021 – Oct 2022

- **Error Spotting Automation:** Built a Python-based "alarm" system that automatically spots errors in lab results, reducing human mistakes by 30%.
- **Data Organisation:** Transformed large volumes of messy records into clean, visual dashboards that managers use to run the hospital more efficiently.

Developer | Tata Consultancy Services

Gujarat, India | Jan 2019 – Aug 2021

- **Legacy System Bots:** Built Selenium "robot" programs that do the manual work of entering data into old systems without modern connection points.
- **Cloud Migration:** Moved the company's important data from on-premise storage to AWS, making the business faster and more modern.
- **Sales Optimisation:** Created a recommendation tool that helped the sales team increase results by 18% through data-led targeting.

EDUCATION & CERTIFICATIONS

- **Master of Data Science in AI** | Bournemouth University (2023)
- **Bachelor of Technology in Computer Engineering** | Ganpat University (2018)
- Palantir Foundry & AIP Builder Foundations Badge · Databricks Fundamentals · Microsoft Certified: Data Science Associate
